

Program Curriculum – Data Analytics (Page 1/2)

Module/Certification	Illustrative Topics	Duration
Python	• Programming Fundamentals • Data Types and Data structures in Python – List, Tuple, Dictionaries and Sets • Conditional statements, Loops – For Loop, While Loop, List Comprehension • Functions in Python – User Defined Functions, Lambda Functions • Important Libraries Numpy and Pandas – Understanding different Data Structures – Arrays, DataFrames • Performing Data Analytics in Python	1.5 Days
SQL	• Fundamentals of RDBMS • Introduction to SQL • DDL and DML • Select query and different operators – Where clause, set operators, built-in functions, Aggregate Functions • Joins and Subqueries – Inner join, Outer join, nested subqueries	• 1.5 Days
PySpark	• Fundamentals of Spark • Introduction to PySpark and terminologies • Pyspark DataFrames • Spark SQL • Data Processing using PySPark	• 2 Days

Program Curriculum – Data Analytics (Page 2/2)

Module/Certification	Illustrative Topics	Duration
DataBricks	• Introduction to DataBricks • DataBricks Architecture • Working with DataFrames • Data Processing with DataBricks • Streaming Data • Security Concerns with DataBricks	2 Days
Power BI	• Introduction to Power BI • Connecting and Shaping the Data • Creating Data Model • Calculated Field with DAX • Visualizing Data with Reports • Optimization Tools • DAX Query view • Button Slicer • Visual Calculation	2 Days
Power Apps	• Introduction to Power Apps • Working with Data Source • Building Model Driven Apps • Building Canvas Apps • Integrating Power BI	• 1 Day

*The ToC can be discussed and Fine Tuned as per requirement

* The Lab support needs the licensed software
